Introduction and Mesopotamia

Metapotamians emerges as a WEB 3.0 project that provides digital services in a special universe and receives the support of organizations that are affiliated with Turkey's largest companies in the field of metaverse and NFT. With the support of ASKON, one of the most important associations in Turkey, the virtual offices and stores of all companies affiliated to this association will take place in the Metapotamians universe. Here, users will be able to visit the offices and stores of the brands, as well as shop.

Metapotamians, which will be created in an area large enough to accommodate approximately 15,000 stores, will be located on a very meaningful region. In this universe, you can spend time seeing and experiencing the Mesopotamian lands, and you will be able to move forward with traces of many things that have lived from the existence of man to the present day.

Mesopotamia is the name given to the region in the Middle East between the Tigris and Euphrates rivers. Mesopotamia is a general name given to some lands of Turkey, Syria, Iraq and Iran, and a very important and fertile region witnessed the migration of many tribes. Mesopotamia has been a region where different tribes lived together throughout history. Continuous migrations to the region for a long time both prevented the political power from following a certain line and fueled the development of cities and societies in cultural and technological terms. The Mesopotamian region has been home to some of the world's most well-known and well-established civilizations, such as the Sumerians, Akkadians, Babylonians, Assyrians and Arameans. Besides, many other tribes lived in Mesopotamia. Mesopotamia, which has been the scene of intense migration since ancient times due to its fertile lands and suitable climatic conditions, has been a region where many different cultures and peoples mixed, and therefore it has been the scene of civilized development. Many civilizations developed in the region, which hosted the first known literate communities, and for this reason it was also called the Cradle of Civilizations.

What is Metaverse?

The word “metaverse” is a new word derived from a mixture of the meanings of the words “meta” and “universe.” Metaverse is a collective and shared virtual world that can be considered the sum of many things such as augmented reality and internet, virtual universes. The term “Metaverse” was first used by a science fiction writer Neal Stephenson in his 1992 novel “Snow Crash.” In “Snow Crash,” the Metaverse is a massively popular virtual world experienced by users equipped with augmented reality technology. The near virtual world is a shared virtual space where people are represented by digital avatars. The virtual world constantly grows and evolves depending on the decisions and actions of the society in it. People will be able to enter the metaverse purely virtual (i.e. with virtual reality) or physically with the help of augmented and mixed reality. his section in the fields be able to interact with them.

1. Virtual World:

Virtual world is a simulated environment that can be accessed by a large number of individuals. Virtual environment displays the user's perceptual data and real-time user behaviors. Virtual reality is currently used in video games, but in the future virtual meetings, medical trainings and even military has the potential to be used in this world.

2. Mixed Reality:

Mixed reality used in video games, education, military training, healthcare, and human-robot collaboration. Location-specific simulations, such as 3D representations of charts or concepts presented in virtual reality headsets or goggles during a university lecture, can be used for mixed reality simulations.

What is Metaverse?

3. Augmented Reality:

Augmented reality enriches the real world by combining digital sensory elements such as graphics, music, sensory data or olfactory data. It can be used to help customers visualize a product in a comparable situation.

4. Virtual Economies:

The term "virtual economy" was originally used for buying and selling virtual items in online games. In many of these games, users can buy things from each other and exchange real money for game the money used in the game. Cryptocurrencies and non-tradable tokens can be used in virtual economies. In the Metapotamians universe, you will be able to see all the technology and updates related to the metaverse and experience it instantly.

What is NFT?

The expansion of the NFT concept is explained as a non-fungible token. Non-fungible token; is a digital asset that represents real-world objects such as art, music, digital games-related items, and videos. It is often bought and sold online with cryptocurrency. You can think of NFT as a kind of cryptocurrency. But what is bought and sold here and seen as valuable is not money but things. In other words, they are digital assets that have a value. The reason why it is similar to crypto currency is that it has a crypto-based structure, such as the ETH (Ethereum) blockchain (a securely shared and decentralized ledger). NFT collections also include all the things produced in the virtual environment and on which ownership rights can be obtained.

Owning a non-fungible token means you own a digitally existing work of art or anything you consider valuable. In other words, you become the digital owner of NFT, which has a unique value. You can sell the digital asset you own, thinking it is valuable, in the same way. You set the price yourself. It should be noted that the creator of the NFT work is not forgotten in this sale. In other words, after selling the design, a certain commission on each sale can go to the creator of it. The person who created it can set this setting before making the sale. Getting commissions is one of the important services that NFT offers. Because in traditional sales, after the work of art is sold, that piece belongs entirely to the person who bought it.

In the Metapotamians universe, these NFTs will appear as products. You will be able to buy NFT by shopping at the stores of the brands in the universe. You will also have physical access to some of these digital products.

What are Metapotamians?

We call the Metapotamians the name of the structure that will contain the feelings of all generations and tribes that have lived since the first existence of Mesopotamian lands but will give an experience beyond current life with metaverse technology. Because we bring together all the values of this region from the past to the future with the structure we have established. While following the traces of Mesopotamia's past, you will find the opportunity to visit and shop in the excellent shops and offices where important brands and companies are located. While experiencing all the beauties of the past and present at the same time, living in the metaverse world with beautiful messages from the future, you will live a life where you can live, shop, and reach new people in social environments just like in real life.

While the Metapotamians present all these opportunities to you in the lands of humanity's existence, they will continue to offer you all the blessings of this region as a surprise. Metapotamians continue to progress with important partnerships to strengthen their own structure by the values of the environment and region. Metapotamians, which incorporates an important association such as ASKON (Anatolian Lions Businessmen's Association) to strengthen it, brings a powerful universe in front of you with the partnership of approximately 8000 companies. Besides the stores of 8000 companies, you will be able to reach all your dreams and reach your happiest moments in this universe, where many important brands will take place.

Metapotamians offers its users an NFT marketplace experience where they can buy and sell NFTs along with virtual land purchase. In addition, the project that will develop with VR solutions; there will be many things integrated like applications such as shopping, art shows, concerts, meetings and job interviews with the AR game experience, integrating daily life. Developments related to all sectors will be realized through real-life brands.

What are Metapotamians?

For example; You will carry out the real estate sector-related purchase and sale services through the representatives of real brands within the Metapotamians project. When purchasing the NFT of a product, you will still receive service from the real brands of that industry.

Within the Metapotamians project;

- Metaverse universe
- Stores and offices of real brands
- Land purchase and sale
- You will be able to access NFT Market services for product purchase and sale.

Universe of Metapotamians

Metapotamians universe will serve as a digital medium built on the real Mesopotamian land. In this region, a total of 15,000 hexagons (lands) will be offered for sale and will be offered to users gradually. In the universe where sales planning will be made in a way that priority will be given to the companies of ASKON and other partner associations, then investors will be able to purchase the lands they wish.

Other users and investors will be able to become involved in the life of Metapotamians by establishing their businesses or offices, as well as the services provided by brands in these areas. Here they will be able to sell and generate income. The use of tens of different sectors and areas of art in the universe to be planned under the leadership of ASKON Association will progress and be used in a way that users can navigate in the environment with their own characters. Real-life progress, social life structure and many more will be reflected here, and the use of the real “metaverse” structure will be in service.

All commercial relations within the Metapotamians universe will be integrated with the NFT Marketplace structure, and the operations within the system will be instantly transferred to the accounts with the blockchain structure. With the help of the Wallet, commercial studies on the entire system will be transferred to users and investors without wasting time, and it will be ensured to proceed in accordance with the real-world commercial structure.

Metaverse Operation

The operation of the Metapotamians project in the metaverse field is that, unlike other projects, it will be improved by considering the values of real-life brands. The prepared structure enables corporates that want to be integrated into the system, especially companies affiliated to the ASKON association, to display, market and trade their values as digital assets. Users will be able to access the brand values that will be exhibited in offices and stores in the Metaverse universe instantly, at any time without the problem of time. They will be able to review all the details and purchase they want at any time in the NFT Marketplace.

Products and works of the brands are produced in limited numbers and designed to make them more valuable and to offer profit opportunities for those who invest in them. For example, when an armchair brand integrates its product into the system with the blockchain structure, it will be able to market this product digitally, both digitally and physically, to anyone using the Metapotamians platform. Although there is a sales base price for all products depending on the sector, the ceiling price will completely depend on the brands themselves. Thus, while lower competition will be prevented, an ecosystem platform will be created by increasing the upstream competition.

While walking around Metapotamians, an environment where you can shop by entering the office or store you want, getting instant information about the products there, will be used actively in the social structure. All users will be able to communicate with each other at any time, and they will be able to create a communication environment as they wish, besides the commercial structure.

Importance of Metapotamians NFT Assets

NFT assets in the platform will be evaluated according to the sector. As explained in the metaverse operation section, the system and all products will be protected with the base price application, while the platform will be open for use without the ceiling price application. They will be able to reach users digitally as they wish, without damaging any of their brand values. Another way of preserving this feature draws attention as the total production of the works. Thanks to the limitations, the products will be produced in a certain number and the purchasers will gain value in their wallets. Thus, the brands on the platform will constantly produce new works, and previous products and works value will continue to raise.

The entire ecosystem will be automated so that all products can be valued and attracted on a platform where 8,000 companies will initially have a total of 15,000 corporate structures, and no product will be added there only for advertising purposes. While determining the number of the work to be sold in his office, a photographer will not only have to make a profit for himself, but also will have to consider this part by the investor and determine the number of NFTs accordingly.

A carpenter, by designing unique products, minting 1, 2 or 5 NFTs, will try to bring his own product to the market at a much more expensive price, competing to make both the platform and his work higher quality and more expensive. On the other hand, another carpenter will not be able to lower the quality of the platform by lowering the price, nor will he be able to lower the value of NFT works of investors and users. Thus, an ever-increasing ecosystem will begin to match the desired quality in the real world on the Metapotamians platform.

Roadmap

Q4 2021

- Project planning done.
- Team building phase is completed.
- Name and value created for the brand.
- Negotiations were held for partnership and association support.

Q1 2022

- ASKON agreement was made.
- Social media work has begun.
- The trademark of the name have been purchased.
- Playland partnership was done.

Q2 2022

- The benefits of the association and partners have been clarified. Contracts completed.
- Software work planning was done.
- Team assignments were clarified.

Q3 2022

- Increased use of R&D for external services.
- Meetings were held with companies affiliated to ASKON.

Roadmap

Q4 2022

- The main titles of the document studies were determined.
- Partnership negotiations were held.
- Negotiations were held for angel investor support.

Q1 2023

- An agreement was made with Crypto Welts for software services.
- Whitepaper contents are completed.
- Website activated.
- Pre-sale planned.
- Marketing have started.
- Partnership agreements have been made.
- VC Agreements were made.

Q2 2023

- The Pancakeswap Listing done.
- Major brands that will take place in the Metaverse universe have been clarified.
- Metaverse universe software started.
- NFT Designs started.
- NFT Marketplace design & Software started.
- Chainlink partnership announced.

Q3 2023

- Marketplace BETA goes live.
- Metaverse universe tests have begun.
- New partnerships are done.
- NFT Mint processes were carried out.
- NFT Marketplace was launched.

Roadmap

Q4 2023

- Metaverse universe launched.
- Brands affiliated to ASKON started broadcasting.
- Service agreements for new brands were made.
- All 15,000 stores and offices were put into active use.

Q1 2024

- Metaverse update performed.
- Partnership announcement has been made.
- New sponsors announced.
- Metapotamians NFTs are up for sale.

Q2 2024

- CEX listing
- NFT Marketplace V2 goes live.
- Bridges to the networks are done and started to serve in 5 different networks.

Q3 2024

- NULS Partnership announced.
- Agreements were made with brands serving in different networks.
- VR integration was done with Metaverse V3 version.

Q4 2024

- Social media integrations to the Metaverse universe were carried out.
- AI integration done.
- With AI, brands started to produce special NFTs.
- CEX listing

Token Details

The token of the Metapotamians project will be called MTP. It will be easily accessible by everyone. As the income and development process increase, it will take its place on the platforms used by all crypto investors with the possibility of using more exchanges.

In the first phase, only the tokens reserved for Presale and IDO will be available and all other tokens will be locked as described in the “Tokenomics” section. The portion reserved for liquidity will not be locked, but it will not be used by the team either. It will be added to the pool for new investors to reach via Pancakeswap.

Users will use their tokens for trading on exchanges, while they will use them for commercial activities in the metaverse universe. Within the metaverse universe and the NFT market, it will not be possible to trade with any asset other than the MTP token.

The tokens in the Governance section will be used for existing platform users, companies owned by associations and the reward system, and will remain locked until the metaverse universe and NFT market are active.

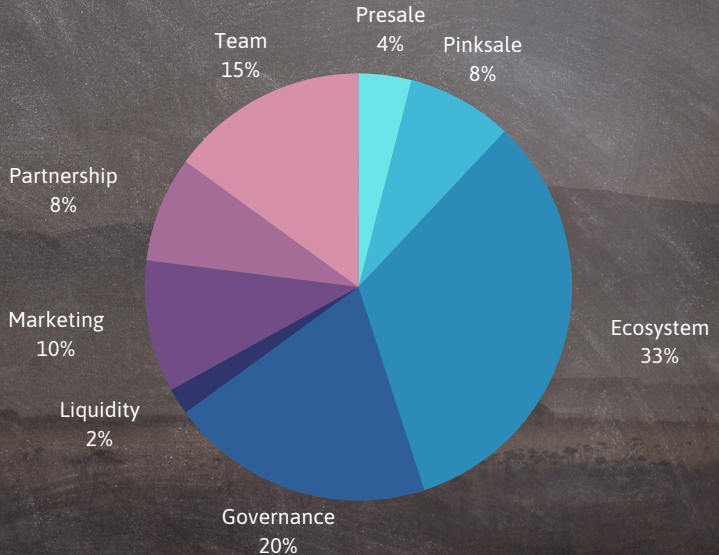

Tokens in Partner and Marketing will be sent according to the agreements made, and will be supported by agreements that will prevent the sales of the agreed places directly from the exchanges. Priority in partner agreements will be for “stake”. Tokens belonging to the team part will be locked for at least 1 year.

Tokenomics

Token Name: Metapotamians
Token Symbol: MTP

Total Supply: 150.000.000

Presale Price: 0.03 USDT
Pinksale Price: 0.05 USDT
